Summary:

Full Stack Engineer (Backend-oriented) with 3 years of experience developing digital products and **microservices** for B2B systems. Proven expertise in delivering end-to-end development tasks. Adept in backend development with proficiency in **Python** frameworks and frontend development using **React**.

Work Experience:

Melingo AI – Full Stack Software Engineer.

2024 – current

- Led the company's flagship product's technical design, architecture, and development from end to end.
- Introduced best practices into the R&D department such as code reviews, PRs, coding standards and conventions, feature branches, and local development.
- Identified and resolved architectural bottlenecks and technical debt in the product, leading to faster and simpler development, testing, and deployment.

Wallter Payments – Full Stack Software Engineer.

2022 – 2024

- Led the development of a cross-functional project to successfully implement a new payment functionality via an API, enabling streamlined and secure payment transactions.
- Led the technical design and development of the company's registration page, ensuring a seamless onboarding process while adhering to design best practices.
- Demonstrated full ownership and responsibility for end-to-end development tasks, covering both front-end and back-end development, from technical design to implementation and deployment.

Celsius Network (Bankrupt) - Back-end Software Engineer.

2021 – 2022

- Developed microservices with an orchestration layer to support system functionality.
- Improved critical daemon backend process **by 333%** in runtime performance.
- Built RESTful APIs from scratch to extend the functionality of new systems and modules.

CATO Networks - Senior Technical Support Engineer.
